Types of crystalloid solutions

There are two main **types** of volume expanders: crystalloids and colloids. Crystalloids are aqueous **solutions** of mineral salts or other water-soluble molecules. Colloids contain larger insoluble molecules, such as gelatin; blood itself is a colloid.

Intravenous therapy is the infusion of liquid substances directly into a vein. Intravenous means "within vein". Intravenous infusions are commonly referred to as drips. Compared with other routes of administration, such as oral medications, the intravenous route is the fastest way to deliver fluids and medications throughout the body. The
